

**DO YOU KNOW WHERE YOUR PATIENTS ARE?** Behavioral health organizations serve critical roles in the care and well-being of vulnerable, costly, and difficult-to-engage patients. Essential to finding and serving these uniquely challenging patients is immediate awareness of when and where they engage care. Cureatr's **Care Transition Notifications™** (CTN) Network tracks patients with behavioral health needs across a region to instantly alert you when your patients receive care, enabling care teams to coordinate appropriate services quickly to initiate the *right* treatment at the *right* time in the *right* place.

## Real-Time Event Notifications

The CTN Network connects leading hospital, post-acute care facilities, RHIOs and HIEs to receive facility Admit, Discharge, Transfer (ADT) feeds. Cureatr "listens" to these live feeds to identify when your patients are registered, admitted or discharged at surrounding facilities, and delivers notifications directly to the patient's care team through mobile and desktop applications or via care system integrations.

## Manage Patients Effortlessly

Notifications may be received on iPhone, Android or Windows mobile device via the Cureatr mobile app, or on a desktop web portal via the Cureatr web app. Care team members can then instantly and securely coordinate care with behavioral health providers and delivery system service partners, and launch standardized structured forms and checklists.

## Communicate When It Matters

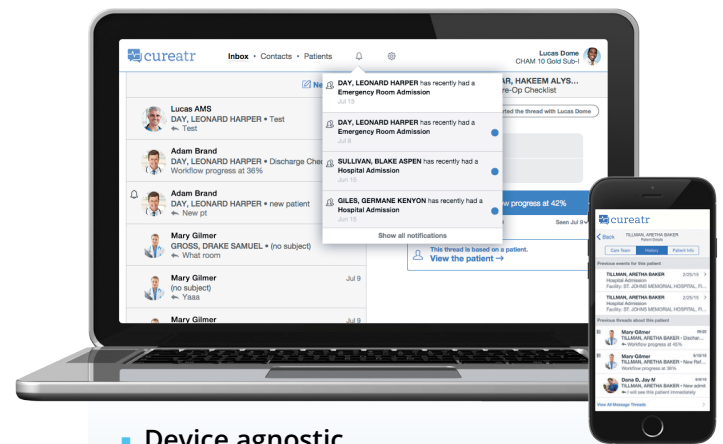

The CTN Network was built with a focus on improving communications during transitions of care. Notifications fit into your care team's, or care manager's, processes to facilitate collaborative decision-making and information exchange across care delivery systems. Resulting improvements in care delivery will reduce avoidable hospital readmissions and admissions to the Emergency Department (ED), directing them instead to BHO services.

## Track Patients in Real-Time

**If a patient has a care event, anywhere in your region, you can know in real-time when they are:**

- Registered at a Facility
- Admitted as an Inpatient
- Transferred to Another Care Setting
- Discharged from Service

Use this information to **reduce avoidable hospital readmissions and unnecessary tests.**

- Device agnostic
- Integrates with BYOD policies
- Supports multiple accounts per user

### Cureatr Works to Transform Your System...

Track and report on care activities anywhere in your region

Transform care transitions with automated real-time alerts delivered to mobile devices

Simplify communication with a single HIPAA-secure mobile messaging solution

### ...And to Achieve Delivery Reform

Reduce preventable admissions and readmissions

Identify and monitor frequent use, high-risk patients

Increase information transfer and follow-up with the PCP, Specialist, and Care Manager at discharge

Improve clinical outcomes and meet quality reporting requirements

### Overview of Features

#### CARE TRANSITION NOTIFICATIONS™

- CTNs via ADT Feeds:
  - Registered at Facility
  - Admitted as Inpatient
  - Transferred
  - Discharged from Service
- Enterprise Portal to Intelligently Route Notifications
- Upload & Manage Multiple Patient Lists

#### SECURE MESSAGING & STRUCTURED CHECKLISTS

- HIPAA-Secure Group Messaging
- Shared Evidence-Based Structured Forms & Checklists
- Secure Photo & File Sharing
- Message Prioritization & Read Receipts
- Set User Status, Availability, Coverage & Service

#### ENTERPRISE TOOLS & ANALYTICS

- Searchable Directory & CTN Routing by Name, Specialty and Role
- Set User & Patient Groups to Customize CTN Delivery
- Cureatr API for 3rd Party Systems Integration
- EMR Integration
- Custom Reporting & Analytics
