

DO YOU KNOW WHERE YOUR PATIENTS ARE? Cureatr is building regional patient tracking networks, delivering real-time **Care Transition Notifications™** (CTNs) to care management teams, anytime patients receive healthcare ANYWHERE in a region.

Cureatr utilizes HL7 Admit, Discharge, Transfer (ADT) feeds from healthcare organizations in each region to deliver real-time event notifications. Regional Launch Partners are the first healthcare organizations in a region to connect their ADT feeds to Cureatr's platform.

Real-Time Event Notifications

Cureatr connects acute and post-acute care facilities, RHIOs, and HIEs to receive ADT feeds. Cureatr “listens” to these feeds to identify when patients are registered, admitted or discharged, delivering real-time notifications to patient care teams, through Cureatr’s mobile or desktop application.

Manage Patients Effortlessly

Notifications are delivered to a care manager or care team responsible for patient care transitions. Providers may receive notifications on their device of choice; iPhone, Android, or Windows Mobile device through Cureatr’s mobile app or on a desktop via Cureatr’s Web app. Care teams can instantly and securely communicate, launch a structured form or a checklist.

Communicate When It Matters

The CTN Network was built to improve communication during transitions of care. Notifications fit into a care teams processes, facilitating reduced avoidable hospital admissions, readmissions and improved patient experience.

Track Patients in Real-Time

Care teams are notified in real-time, when a patient experiences a care event anywhere in a region:

- Registered at a Facility
- Admitted as an Inpatient
- Transferred to alternate care setting
- Discharged

This information can be used to reduce avoidable hospital admissions and unnecessary tests.

Key Clients

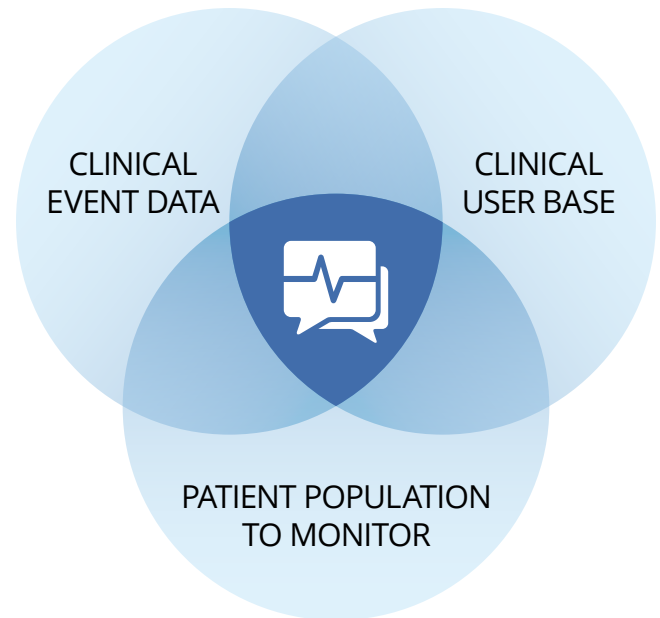

Cureatr Works to Transform Your System...

-  Track and report care activities anywhere in a region
-  Transform care transitions with automated real-time alerts delivered to mobile devices
-  Simplify communication with single HIPAA-secure mobile messaging solution

...And to Achieve Care Delivery Reform

-  Reduce preventable admissions and readmissions
-  Identify and monitor frequent use, high-risk patients
-  Increase information transfer and follow-up with the PCP, Specialist, and Care Manager at discharge
-  Improve clinical outcomes and meet quality reporting requirements

Launching a New Region of Care Transition Notifications™ Requires Three Things:

Product Features

CARE TRANSITION NOTIFICATIONS™

- CTNs via ADT Feeds:
 - Registered at Facility
 - Admitted as Inpatient
 - Transferred
 - Discharged
- Enterprise Portal Intelligently Routing Notifications
- Upload & Manage Multiple Patient Lists

PATIENT-CENTRIC MESSAGING & STRUCTURED CHECKLISTS

- HIPAA-Secure Group Messaging
- Shared Evidence-Based Structured Forms & Checklists
- Secure Photo & File Sharing
- Message Prioritization & Read Receipts
- Set User Status, Availability, Coverage & Service

ENTERPRISE TOOLS & ANALYTICS

- Searchable Directory & CTN Routing by Name, Specialty and Role
- Set User & Patient Groups to Customize CTN Delivery
- Cureatr API for 3rd Party Systems
- EMR Integration
- Custom Reporting & Analytics
