

DO YOU KNOW WHERE YOUR PATIENTS ARE? Cureatr's **Care Transition Notifications™** (CTN) Network delivers real-time alerts whenever your patients are admitted, discharged or transferred from one care setting to another. Cureatr notifications provide visibility for healthcare providers to track patients anytime, anywhere they receive care. This real-time awareness allows providers to share in clinical decisions, deliver appropriate levels of care, prevent readmissions and reduce unnecessary hospital costs.

Real-Time Event Notifications

The CTN Network includes leading hospitals, post-acute care facilities, RHIOs, and HIEs to receive facility Admission, Discharge, and Transfer (ADT) feeds. Cureatr “listens” to these live feeds to identify when your patients are registered, admitted or discharged at surrounding facilities, and delivers real-time notifications directly to the patient’s care team through mobile and desktop application, or via care system integrations.

Manage Patients Effortlessly

Notifications are delivered to an individual, such as a care manager, or to a team responsible for patient care transitions. Providers may receive notifications on their iPhone, Android, or Windows Mobile Device via the Cureatr mobile app, or on a desktop web portal via the Cureatr Web app. They can instantly and securely coordinate communications with the care team, and launch standardized structured forms and checklists.

Communicate When It Matters

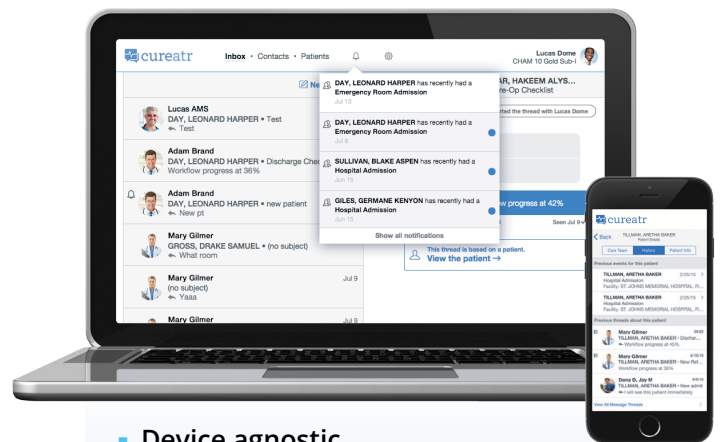

The CTN Network was built with a focus on improving communications during transitions of care. Notifications fit into your care teams’ processes to facilitate collaborative decision-making and information exchange across your care delivery system. Resulting improvements in care delivery will reduce avoidable hospital readmissions and improved patient experiences.

Track Patients in Real-Time

Know in real time when any of your patients engage care anywhere in your region, including:

- Registered at a Facility
- Admitted to an Emergency Room
- Admitted as an Inpatient
- Transferred to Another Care Setting
- Discharged from Service

This information allows collaborative delivery of timely and appropriate care, and limits avoidable errors in care.

- Device agnostic
- Integrates with BYOD policies
- Supports multiple accounts per user

Cureatr Works to Transform Your System...

Track and report on care activities anywhere in your region

Transform care transitions with automated real-time alerts delivered to mobile devices

Simplify communication with a single HIPAA-secure mobile messaging solution

...And to Achieve Delivery Reform

Reduce preventable admissions and readmissions

Identify and monitor frequent use, high-risk patients

Increase information transfer and follow-up with the PCP, Specialist, and Care Manager at discharge

Improve clinical outcomes and meet quality reporting requirements

Overview of Features

CARE TRANSITION NOTIFICATIONS™

- CTNs via ADT Feeds:
 - Registered at Facility
 - Admitted as Inpatient
 - Transferred
 - Discharged from Service
- Enterprise Portal to Intelligently Route Notifications
- Upload & Manage Multiple Patient Lists

PATIENT-CENTRIC MESSAGING & STRUCTURED CHECKLISTS

- HIPAA-Secure Group Messaging
- Shared Evidence-Based Structured Forms & Checklists
- Secure Photo & File Sharing
- Message Prioritization & Read Receipts
- Set User Status, Availability, Coverage & Service

ENTERPRISE TOOLS & ANALYTICS

- Searchable Directory & CTN Routing by Name, Specialty and Role
- Set User & Patient Groups to Customize CTN Delivery
- Cureatr API for 3rd Party Systems Integration
- EMR Integration
- Custom Reporting & Analytics
