

ARE YOU TREATING ALL OF THE PATIENTS YOU CAN? Cureatr's **Care Transition Notifications™** (CTN) Network delivers real-time alerts whenever patients are admitted, discharged or transferred from one care setting to another. Cureatr notifications allow Skilled Nursing Facilities (SNFs) and their referral partners in integrated care delivery networks (IDNs) to track patients anytime, anywhere they receive care. This real-time awareness enables SNFs to proactively capture care transfers, effectively participate in bundled, episodic, and other shared-risk payment programs, and improve overall care delivery by closing gaps in care transitions.

Real-Time Event Notifications

Cureatr's CTN Network includes leading hospitals, post-acute care facilities, SNFs, RHIOs, and HIEs to receive facility Admission, Discharge, and Transfer (ADT) feeds. Cureatr "listens" to these live feeds to identify when patients are registered, admitted or discharged at surrounding facilities, and delivers real-time notifications directly to the patient's care team through mobile and desktop application, or via care system integrations.

Manage Patients Effortlessly

Notifications are delivered to an individual, such as a care manager, or to a team responsible for patient care transitions. Care teams at SNFs and at major SNF referral organizations may receive notifications on their iPhone, Android, or Windows Mobile Device via the Cureatr mobile app, or on a desktop web portal via the Cureatr Web app. They can instantly and securely coordinate communications with other care team members across different settings, and launch standardized structured forms and checklists.

Communicate When It Matters

The CTN Network was built with a focus on improving communications during transitions of care. Notifications fit into your care processes to facilitate collaborative decision-making and information exchange across a care delivery system. Resulting improvements in SNF care transitions will increase network participation, reduce avoidable hospital readmissions, and improved patient experiences.

Partner Benefits

SNFs can position their organization as being healthcare reform-ready, strategically forming relationships with acute care providers, ACOs, and other integrated delivery systems:

- **Become true Preferred Partners**, adding value to referral organizations along the care delivery network.
- **Participate in Shared Risk Payment Schemes** by automating care transition communication and enabling effective resource allocation within integrated delivery networks.
- **Optimize Value-Based Payments** by improving upon care delivery quality metrics and patient satisfaction scores.
- **Proactively increase referrals** by tracking healthcare events on eligible patients regionwide.

Cureatr Works to Transform Your System...

Track and report on care activities anywhere in your region

Transform care transitions with automated real-time alerts delivered to mobile devices

Simplify communication with a single HIPAA-secure mobile messaging solution

...And to Achieve Delivery Reform

Increase participation and referrals from integrated delivery systems

Identify and recapture formerly treated patients during healthcare events

Increase information transfer and follow-up with delivery system and referral partners

Improve clinical outcomes and meet quality reporting requirements

Overview of Features

CARE TRANSITION NOTIFICATIONS™

- CTNs via ADT Feeds:
 - Registered at Facility
 - Admitted as Inpatient
 - Transferred
 - Discharged from Service
- Enterprise Portal to Intelligently Route Notifications
- Upload & Manage Multiple Patient Lists

PATIENT-CENTRIC MESSAGING & STRUCTURED CHECKLISTS

- HIPAA-Secure Group Messaging
- Shared Evidence-Based Structured Forms & Checklists
- Secure Photo & File Sharing
- Message Prioritization & Read Receipts
- Set User Status, Availability, Coverage & Service

ENTERPRISE TOOLS & ANALYTICS

- Searchable Directory & CTN Routing by Name, Specialty and Role
- Set User & Patient Groups to Customize CTN Delivery
- Cureatr API for 3rd Party Systems Integration
- EMR Integration
- Custom Reporting & Analytics
